About me

I am a student and programmer who wants to learn the latest technologies and best solutions. I have completed both frontend, backend and data-related projects. I'm getting better every year - I do what I like and that makes me always eager to learn more. I hope that with my dedication and creativity I can become part of a bigger project.

Key Projects

Project INfinity

E-learning platform. Contains high school graduation exams from previous years along with tools to solve them and courses to help you learn. The project includes authentication, payment, video streaming, database connections and animations.

Project microservices

A project I use to learn new technologies and best practices for producing a well-scaling microservices application.

Work Experience

>>> Data Engineer Intern

PegaSystems [1 July 2024 – Current] Kraków, Poland

Creating pipelines, managing cloud infrastructure, and preparing data for further processing - working with the data scientist team. Working with AWS, python and writing additional scripts needed, e.g. in bash. Working in Scrum. The AWS services I have used most often are Lambda, Api Gateway, Glue, Athena, ECS, S3, CodePipeline, SNS, SQS. I also earned the AWS Cloud Practitioner certification and began to realize IBM's Data Enineeging course. I have participated in many projects.

> Erasmus+ Intern

TreGi s.a.s [2 May 2022 – 27 May 2022] Ancona, Italy

Familiarization with network and web technologies used in the company's ecosystem. I managed the server's software and services and learned how to use the administrative web application available at the workplace.

> Intern

TELENETIKS [13 Mar 2022 – 7 Apr 2022] Biała, Poland

Learning and practicing computer networking. Gain experience in network management - setting up fiber connections, configuring CISCO and MikroTik routers, troubleshooting, working on SQL databases, customer service.
